Corel Draw Graphics Suite X7 has a serial number, which is called license number. This will be active as long as the software is installed and is available in your system. You can use that serial number in later versions of the same software in the same system to get license for that software. Corel Draw X7 License Key has been updated. Fixed Issues.Q: use useState result in child In this example I have a list of users, I print each user name and when you click on a user I get a specific user of the list in the console. But I have a problem when I want to do that every user has a specific color, I need to create an array of colors in useState and then use it in that event. However the array when I print it still says [object Object] I think I have to make the array into a function to make it work properly. const [users, setUsers] = useState([]); const clickHandler = (e) => { const id = e.target.id; const user = users.find(user => user.id === id); setUsers([...users, user]) } const renderUser = (user) => { return ( {user.name} ); } const List = ({ users }) => { useEffect(() => { const spy = jest.fn(); users.forEach(user => spy(renderUser(user))); return () => { console.log(spy); } }, []); return ( {users.map(renderUser)} ); } A: useState() creates 3ef4e8ef8d
